ontological impertinence, resurrection of "materialism" from atemporal theologians who swap in dream crystals for THINGS. The suppressed thing is "sensory" and "for specified primate who gives a fuck." FEUERBACH. My stepdad's dump in the toilet. "Piles of solid excrement." Or the egg fried over easy. Orange and white. Hot. The smell. The to-be-eaten-ness for hungry ape. The "other than the memory"-ness of its "perceptual quality." The re-empirical world of dialogical positivism.

A dog bit my hand on Christmas 2024. He ripped a gash in my palm. It hurt but I was not worried about pain that would pass. I worried about medical bills. The bleeding gash was "there" as maybe expensive visits to the doctor as maybe fucked up credit as maybe hobble of my vague total life project. The sub-theological "thing" is sensory and futural thru long-term worry. I worry because the thing is not in my pineal gland. I am in the dangerous world, and danger is relative to preference.

Heidegger via Hobbes. I am a visceral scheming. Projectile. Like a missile program to improvise the circumvention of unforeseen obstacles toward a Xtarget updated as a function of these evasions.

A "pseudo-problem" is a toy for the seminary crowd. The "heard problem" is gas from a forgetting of primate placement. "Positivism" in the ears of flaky Mr. pseudo-science rings like another thesis in the game it demolishesxx
